

**Information for participants of the southern hairy-nosed wombat state-wide survey:**  
**Survey 2**

The aim of this South Australian state-wide survey is to gather information on southern hairy-nosed wombats, and determine effective and non effective management techniques, as well as attitudes towards, behaviour related to, and knowledge regarding this species.

This information is vital for the management of the southern hairy-nosed wombat, and of the impacts caused by the species. The last survey was undertaken in 1989, and since then anecdotal reports have wombat numbers both increasing, and dramatically declining, as well as moving from the known core area, to peripheral colonies previously undocumented. There are also reports of increased, and more severe, conflict with agricultural practices.

As a resident in this region we wish to gather as much information about your thoughts on a range of topics regarding the southern hairy-nosed wombat. **Survey 2** is completely ANONYMOUS. If you wish to participate in **Survey 2** you are required to be over 18 years of age.

The information collected from **Survey 2** will allow those involved in the management, conservation, and policy making decisions of this species to gain an understanding of the issues that may be impacting residents in wombat regions and make informed decisions on how to manage the problems.

**Survey 2** will take approximately 20 – 30 minutes to fill out. All answers are CONFIDENTIAL and you may withdraw from the study at any time. Information gained during the study may be published, but you will not be identified and personal results will not be divulged.

By completing this survey you are giving consent to use the information provided.
